## Gamma symbol in word character code

The Delta upper case Δ or Delta lower case δ symbols in Microsoft Word, Excel, PowerPoint, or Outlook. Both in Office for Windows and Office for Mac. Delta (uppercase Δ / lowercase δ) is the fourth letter of the Greek alphabet. It's the "d" sound in Modern and Ancient Greek. Delta uppercase Δ symbol is used in mathematics to represent change in a variable, while the lowercase symbol δ indicate small quantities in mathematical proofs, involving limit, a key concept within calculus. To us non-mathematicians Delta uppercase Δ is just a triangle while δ is circle with funny squiggle on top. How Delta upper case and Delta lower case look in different fonts. Here's some examples of how the Delta upper case and Delta lowercase symbols look in common Office fonts in Word 365. Delta upper and lowercase symbol codes. These are the important code numbers or values you'll need to enter the two symbols Use the Alt + X shortcut in Word for Windows, for example type 0394 then Alt + X to enter Δ. Or enter the value into Character Code fields in Symbol dialog boxes to jump to that symbol. Delta uppercase symbol Δ U+0394 Delta lowercase symbol δ U+03B4 Quick access for commonly used symbols. If you use a symbol often, a fast way to enter it is AutoCorrect. Once in a document you can copy it to AutoCorrect and make your own shortcut. Word, Excel, PowerPoint and Outlook Insert | Symbols | Symbol and look for the Delta symbol using Character Code 0394. Window 10 Emoji Panel The Windows 10 Emoji Panel has the Delta symbol Δ. Use Win + . (period/fullstop) to open the panel. Choose the Symbols tab (the third of the top row icons), then the Language Symbols section which is marked by the capital Q. Delta letters are in the top row. See Emoji Panel is part of Windows 10 that totally sucks Windows Character Map. Similarly, the Windows Character Map accessory in all Windows releases. Character Map has a search feature, something missing from the Insert | Symbol in Office. Or use one of the hex character codes to jump to the right part of the list. MacOS and Office for Mac inserting characters On a Mac, to enter the Male, Female or combo symbol: Command + Control + Spacebar shortcut to enter the Character Viewer. Search for "Delta" should find the symbol you need as the first result. Despite the name Character Viewer, the Apple system tool will also insert characters into any program, including Office for Mac. Epsilon lower ε or upper case E symbols in Office and moreQuickly type Greek letters like beta, delta & gamma in WordDelta upper Δ or lower δ symbols in Word, PowerPoint and moreSigma upper Σ or lower σ case symbols in Word and OfficeMale ♂, Female ♀ or ♀ symbols in Word & PowerPoint Selecting (Insert Tab, Symbol) will give you the complete character set for every font installed font on your PC.This dialog box makes it very easy to insert special symbols and characters into cells.It is important to remember that each font has a different set of special characters.Not all the fonts support the Euro. Fonts that do support the Euro are Courier, Tahoma, Times and Arial.Symbols tabFont - Select the font you want to use to display your character or symbolSubset - Allows you to jump to specific areas in the character setBasic Latin, Latin-1 Supplement, Latin Extended-A, Latin Extended-B, Spacing Modifier Letters, Greek and Coptic, General Punctuation, Currency Symbols, Letterlike Symbols, Mathematical Operators, Geometric Shapes, Private Use AreaCharacter Code - Displays the code of the currently selected character. You can choose from displaying the code in either Unicode hex, ASCII decimal or ASCII hex.Special Characters tabThis gives you access a number of commonly used special characters such as the trademark and copyright symbols.These characters will be left aligned by default.Alt + Number PadAlt + Symbol / Description20Paragraph • 21Section - 30128Euro - 60169Copyright - 60174Registered - 90153Trademark - 90185Subscript 1 - 90178Subscript 2 - 90179Subscript 3 - 90188Quarter - 90189Half - 90190Three Quarters - 90188Gamma + Symbol / Description224Alpha - 8225Beta - 8226Gamma - 8235Delta - 8238Epsilon - 1233Theta - 8227Pi - 8230Mu - 8228Uppercase Sigma - 8229Lowercase Sigma (or select upper case and use Shift + F3 to change case) - 8231Tau - 8232Uppercase Phi - 8237Lowercase Phi - 1234Omega - 8209importantYou can enter the Euro symbol by pressing Alt + 0128 (on the numerical keypad)© 2021 Better Solutions Limited. All Rights Reserved. © 2021 Better Solutions Limited TopPrevNext To insert the alpha, beta, gamma and delta letters in a Word document, you have different ways:
1. Using the Symbol font: This method is very useful when you need to insert symbols rarely and it works only for Latin or Greek letters. Anytime, when you type the text in the Word document, you can switch to the Symbol font and use the corresponding Latin letters to enter Greek letters:
1. Click Ctrl+Shift+Q to switch your current font to the Symbol font.
2. Use symbols like normal font (e.g. in Symbol font keyboard button "a" equals Greek letter "α", keyboard button "b" equals Greece letter "β", ..., "T" -> "Τ", ..., "W" -> "ω", etc.).
. . . Note: This method works for inserting only one letter. Thus, if you want to insert several symbols, you need to repeat these steps for each insertion. After entering one letter using the Symbol font, the next character is entered using the previous font. If you click Ctrl+Shift+Q twice, Word does not switch to the previous font, and the Symbol font doesn't stop to work after the first entered symbol. Thus, you will need to change the current font and style later.
II. Using the Equation: This way is perfect if you don't need to care about the format and compatibility with previous versions of Microsoft Office (a recommended approach for physical science and mathematics, which require a lot of math in the text with consistent fonts for all equations and symbols).
1. In the paragraph where you want to insert the symbol, click Alt+= to insert the equation block.
2. In the equation block without any additional efforts, you can enter any letter that you need just by typing its name of the letter.
. . . Note: You can create a shorter name, see the point III.2.
III. Using auto-replace: When you work with many documents and often need to paste one special symbol, you may not want to insert an equation each time. Microsoft Word offers a helpful feature named AutoCorrect. The AutoCorrect options in Microsoft Word propose two different ways to quickly add any special character, such as an alpha, beta, gamma and delta letter from the Greek alphabet, or even large pieces of text: Using the Math AutoCorrect options, Using the Replace text as you type function of the AutoCorrect options.
III.1. Using AutoCorrect for Math: Using this method, you can benefit the Math AutoCorrect options without inserting an equation. To turn on or turn off the AutoCorrect of the Math symbols, do the following:
1. On the File tab, click Options.
2. In the Word Options dialog box, on the Proofing tab, click the AutoCorrect Options... button.
3. In the AutoCorrect dialog box, on the Math AutoCorrect tab, select the Use Math AutoCorrect rules outside of the math regions option: After clicking OK, you can use any of the listed Names of symbols and Microsoft Word will replace them to the appropriate symbols: Note: If you don't need the last replacement, click Ctrl+Z to cancel it.
III.2. Using Replace text: This method, you can come up with some sequence to use for replacing it to the Latin or Greek letter. For example, to replace some Greek letter with not short names, it is possible to use:
. . . To define the new, short names to some Greek letters, do the following:
1. Insert the symbol for which you want to define the short name, using the Symbol font and select it.
2. On the File tab, click Options.
3. In the Word Options dialog box, on the Proofing tab, click the AutoCorrect Options... button.
4. In the AutoCorrect dialog box, on the AutoCorrect tab: Ensure that the Replace text as you type option is selected, The selected symbol has been inserted in the With field. If you use the Formatted text, select this radio button: In the Replace field, type the sequence that should be replaced to the symbol, If such sequence doesn't used yet, click Add.
IV. Using a shortcut key: Microsoft Word provides a way to define the shortcut key for the most often used functions. Thus, you can assign a shortcut for inserting the alpha, beta, gamma or delta letter:
1. On the Insert tab, in the Symbols group, click the Symbol button: Note: If you use the character very often, you will find it in the Symbol dropdown list.
2. Click More Symbols...
3. On the Symbol dialog box: To insert the alpha, beta, gamma or delta from the current font (if exists), from the Subset dropdown list, select the Greek and Coptic; To insert the alpha, beta, gamma or delta from the Symbol font, from the Font dropdown list, choose the Symbol font;
4. Choose the symbol and click the Shortcut Key... button to open the Customize Keyboard dialog box;
5. In the Press new shortcut key field, type the key combination that you want to use for the symbol or character (e.g., for symbol δ used Alt+D) and click Assign. Note: Be careful, you can reassign the assigned already shortcuts in Word. Be sure, that after Current assign to: there are no active Word functions. In any case, you can reassign any existing function in Word to a different key. See also this tip in French: Comment insérer alpha, bêta, gamma, delta et autres symboles grecs dans Word.
